**BRISBANE
ENDOSCOPY
SERVICES**

Brisbane Endoscopy Services ceased operations at our Sunnybank location at the end of December, with all procedural services relocating to our Springwood facility.

All patient care and procedures are provided at Southside Endoscopy Centre Springwood – South East Queensland's most modern and technologically advanced endoscopy facility, equipped with two fully operational theatres.

Our experienced specialist team – Dr Michael Miros, Dr Hadi Moattar, and Dr Shahram Safa – will continue to provide patient care, and we are delighted to welcome Dr Kannuthurai to the practice.

Welcome to the team – Dr Sutharshan Kannuthurai

We're pleased to welcome **Dr Kannuthurai**, Gastroenterologist and Interventional Endoscopist, to Southside Endoscopy Centre. Dr Kannuthurai specialises in digestive, liver, pancreatic, and biliary conditions, **with expertise in:**

- General Gastroenterology
- Liver Disease
- Inflammatory Bowel Disease (IBD)
- Pancreatic & Biliary Disorders

He completed advanced training and an Interventional Endoscopy Fellowship in Melbourne, and is dedicated to compassionate, patient-centred care.

Dr Kannuthurai is now available at Southside Endoscopy Centre for procedures and consultations.

Digestive Facts – Did you Know?

- Your digestive system processes around 30 tonnes of food over an average lifetime.
 - The small bowel is about 6–7 metres long, while the large bowel is only about 1.5 metres long.
 - Most polyps cause no symptoms, which is why bowel screening is so important.
 - Colonoscopy is one of the few medical procedures that can help prevent cancer by removing pre-cancerous polyps before they become harmful.
- During an endoscopy, doctors can take tiny tissue samples (biopsies) that are painless and help diagnose a range of digestive conditions.
 - Good bowel preparation is one of the most important factors in ensuring a high-quality colonoscopy.
 - Looking after your digestive health with a balanced diet, regular exercise, and participation in screening when eligible can have a lasting impact on your overall wellbeing.

Bowel Cancer Awareness Month

Did you know? A colonoscopy is one of the few screening tests that can help prevent cancer, not just detect it. During the procedure, doctors can identify and remove pre-cancerous polyps before they have the chance to develop into bowel cancer.

This is especially important because early bowel cancer often causes no symptoms. That's why participating in screening and having a colonoscopy when recommended are some of the most effective ways to protect your bowel health.

Recent patient Feedback

Very caring and friendly team who addressed my concerns with kindness and care. Thank you very much.

Dr Miros and his dedicated staff are terrific, very caring and professional.

I have found everything very good. All the staff from reception staff to medical staff, easy to talk to and they show great care to us. I would recommend Southside Endoscopy Centre to everyone.

Staff/nurses & doctors were all amazing. Well staffed, knowledgeable, caring and on time.

5 star treatment from start to finish.

Always professional and friendly.

Amazing! Very happy with my care before and after.

Everyone was amazing, calming and friendly. Each step of the way was explained well and transitions were seamless. Thank you to all the team for taking such great care of me. I really appreciated the 1:1 time with the Doctors before – this made such a big difference.

Very professional, clean and on time. Amazing service & friendly staff.
